What is claimed is:

- 1. A plate changing apparatus comprising:
- a loader supported by a frame to be movable
- 3 substantially parallel to a sheet convey direction and
- 4 serving to feed a new plate to a plate cylinder;
- 5 loader moving means for moving said loader
- 6 from a retreat position to a wait position close to the
- 7 plate cylinder during plate changing; and
- a plate removal unit fixed to the frame to
- 9 recover an old plate discharged from the plate cylinder.
 - 2. An apparatus according to claim 1, wherein
- 2 said loader comprises a guide for guiding the old plate
- 3 removed from the plate cylinder to said plate removal
- 4 unit.
 - 3. An apparatus according to claim 1, wherein
- 2 said loader comprises extracting means for extracting
- 3 the old plate from the plate cylinder.
 - 4. An apparatus according to claim 1, further
- 2 comprising:
- a base for swingably supporting said loader
- 4 between the substantially vertical wait position and an
- 5 inclined plate feed position and movable parallel to the
- 6 sheet convey direction; and

7 driving means for driving said loader from the wait position to the plate feed position during plate 8 changing, to move a distal end of said loader that holds 9 a new plate to be close to the plate cylinder. 10 5. An apparatus according to claim 4, wherein 2 said loader comprises extracting means for extracting the old plate 3 from the plate cylinder when said loader is located at 4 the plate feed position, and 5 a guide for guiding the old plate, extracted 6 from the plate cylinder by said extracting means, to 7 said plate removal unit through said loader. 8 An apparatus according to claim 4, wherein 6. said loader comprises a switching guide member 2 for switching a plate removal path for the old plate and 3 a plate feed path for the new plate when said loader is 5 located at the plate feed position, and 6 said switching guide member guides the old plate, removed from the plate cylinder during plate 7 8 removal, to said plate removal unit through the plate 9 removal path. An apparatus according to claim 1, wherein 7. said plate removal unit removes the old plate removed from the plate cylinder through said loader. - 51 -

6: 6

- 8. An apparatus according to claim 1, wherein
- 2 said plate removal unit comprises
- 3 a hook which is supported to be movable
- 4 forward and backward into and from a plate removal path
- 5 for the old plate, temporarily retreats from the plate
- 6 removal path by a bent portion of one end of the old
- 7 plate discharged into the plate removal path, and moves
- 8 forward into the plate removal path by a weight thereof,
- 9 and
- 10 hook moving means for moving said hook upward.
 - 9. An apparatus according to claim 1, wherein
 - 2 said plate removal unit comprises
 - 3 a hook which is supported to be movable
 - 4 forward and backward into and from a plate removal path
 - 5 for the old plate, and engageable with a bent portion of
 - 6 one end of the old plate,
 - 7 a biasing member for biasing said hook in a
 - 8 direction to move forward into the plate removal path,
 - 9 a prohibiting member for prohibiting forward
- 10 movement of said hook into the plate removal path
- 11 against a biasing force of said biasing member, and
- 12 hook moving means for moving said hook in a
- 13 plate removal direction.
 - 10. An apparatus according to claim 1, wherein

(2:12

- 2 said plate removal unit comprises a removed plate guide
- 3 board which guides and removes the old plate, removed
- 4 from the plate cylinder, substantially perpendicularly
- 5 along a front surface of a printing unit.
